

## Environmental Policy

ZTE always adheres to sustainable development on a global scale, paving a green path to digital economy by promoting green operations, green supply chain, green digital infrastructure, and empowering the green development of industries, thereby minimizing our impact on the environment and climate.

ZTE's goal is to realize carbon peak by 2030 and carbon neutralization by 2060. In addition, ZTE is committed to continuously improve our environmental performance and work towards resource efficiency and sustainable waste management to promote circular economy. To achieve the goals, ZTE will:

- Comply with the applicable laws and internationally recognized standards;
- Operate internationally recognized environmental management systems, and maintain improvement;
- Integrate environmental strategies and goals into the business planning process, so as to ensure that environmental management is a vital part of business operations;
- Implement eco-design and optimize life cycle management for our products and services to minimize to environmental impact;
- Monitor, evaluate and continuously improve environmental management practices to enhance resource utilization;
- Prevent pollution, reduce, reuse and recycle waste, and minimize the consumption of resources;
- Review and demonstrate the environmental policy and performance on a regular basis;
- Empower our employees and partners through education and training to jointly improve our environmental management capabilities.
